Our Missions

The Gattefossé Foundation contributes to improve tomorrow's healthcare: a more human, person-centred approach to health that places prevention and quality of life at the heart of care.

True to its family heritage, it is an advocate for aromatherapy having a place as a complementary therapy within an integrative health approach.

Its missions are structured around three major areas:

- **We encourage research in aromatherapy** to improve our understanding of the mechanisms of action of essential oils and document their therapeutic value, particularly in mental health and infectious diseases.
- **We value the practice of aromatherapy as a complementary care for patients** and support professionals who use aromatherapy and demonstrating the benefits for patients and populations.
- **We support the advances in integrative health** to better prevent and cure diseases.

Through its actions, the Gattefossé Foundation contributes to building a more sustainable and responsible healthcare system for the future.

Editorial

Sophie
Gattefossé-Moyrand

President

In the current context of profound transformation of health systems, the Foundation has strengthened its role as a key player, working at the interface between science, care, communities and international projects.

The Foundation has always sought to find the right balance between humility and ambition. Humility in the way we are, in supporting, listening and learning.

Our ambition is to contribute to advancing the science of clinical aromatherapy by creating a community of international researchers. Improving the patient's quality of life through use of essential oils as part of a holistic and integrative approach remains our primary mission.

For more than 15 years, the Gattefossé Group has funded our organisation, its operations and activities, even though philanthropy is strained in a time of uncertain economic climate. This commitment enables us to pursue our ambition to promote aromatherapy worldwide.

This annual report demonstrates a strong conviction:
Clinical aromatherapy, rigorously supervised and integrated, contributes to a more holistic, sustainable and responsible approach to health.

Delphine Marchaud

Director

With the challenges we face in health and society today, it is becoming essential to rethink our health systems. We need to improve these systems to ensure better health outcomes globally. Tomorrow's healthcare will need to be more holistic, more preventive and more human. It is in this context that our action is taking place.

We support practitioners who use essential oils to improve the health of the public and we are committed to continually adapting to global change so we can best uplift those taking concrete action on the ground.

In 2025, from Rio to Lyon, from Paris to Saint-Rémy-de-Provence, we went to meet researchers, healthcare providers and committed stakeholders. Through these exchanges, the Foundation confirmed its role as a link between the science and the practice of aromatherapy. This process has also led to the creation of two expert groups dedicated to exploring the potential of essential oils in the context of two major public health challenges: antibiotic resistance and mental health.

Together, the new World Health Organization (WHO) strategy on traditional, complementary and integrative medicines and the One Health approach offer us a framework to structure our work for the years to come. They reinforce the validity of our work in fostering the development of clinical aromatherapy as a legitimate discipline subject to supervision and evaluation.

Through linking science to healthcare practices to the needs of populations, we can play our part in supporting healthcare to develop along a more integrative and sustainable path.

Advancing science for evidence-based aromatherapy

Charlène Vias, Radio Technician, Jonzac Hospital, 2022 Grant

In 2025, the Foundation continued to support research and evaluation training programmes for practitioners. It also set up two new expert groups, covering antimicrobial resistance and mental health.

Training practitioners in clinical research

The development of the Research Academy

Since 2024, the Foundation has supported the Research Academy created by AIA, the Alliance of International Aromatherapy, an educational platform designed to train and support aromatherapists in evaluating their practices and writing case studies.

In 2025, the Research Academy added to its programme mentoring sessions between experts and aromatherapists, consisting of individual or group coaching over four weeks.

This new module has helped around twenty professionals write and publish case studies. Four case studies have already been published in the journal *Aromatics in Action*®, which demonstrates the concrete impact of the programme.

At the same time, the Research Academy continues to create educational tools (webinars, videos) and shares content on its own YouTube channel. The AIA hopes that as a result of these efforts, more of its members will contribute posters and case studies for its annual conference in September 2026.

Initial outcomes of the ICAN Masterclass

In 2024, the Foundation supported an 8-session training programme on clinical research, led by Dr Marie Polley and Dr Helen Seers from Meaningful Measures (UK), for 20 professionals from the International Clinical Aromatherapy Network (ICAN).

This masterclass allowed participants to improve their understanding of the differences between evaluation, research and auditing, equipping them with concrete tools to structure and analyse their aromatherapy practices.

"This training showed me that evaluation is achievable! I have already devised a protocol to measure the effects of one of my interventions, and I look forward to testing what we have learned."

Training has already had concrete effects on participants' professional practice: some now measure the results of their interventions, structure their evaluation and gain a greater perspective of their professional practice. Another group have written a first scientific article that was published in December 2025 in the *European Journal of Integrative Medicine*, entitled "Evaluating the feasibility of using the TREATS tool in determining the quality of randomised trials of clinical aromatherapy".

"This masterclass gave me step-by-step guidance to publishing an article. Today, I feel able to share my experiences and research."

AntiMicrobial Resistance: a One Health priority

The Foundation acts as a facilitator and catalyst.

The new group of experts in infectious diseases created by the Gattefossé Foundation is a European, multidisciplinary collective of microbiologists, clinicians and veterinarians (Italy, the United Kingdom and France). What they have in common is the belief that essential oils can offer useful complementary solutions in the fight against antimicrobial resistance (AMR).

This collective is the first of its kind, and it was created to foster dialogue between disciplines that usually work in silos to develop a translational approach that integrates in vitro research, animal models and human clinical practice.

From left to right: Ronan Cognet, Rhiannon Lewis, Philippe Colls, Valerie Edward Jones, Pascale Gelis Imbert, Nathalie Schmitt, Dami Okeyioyin, Paola Matarelli, Maura Di Vitto, Véronique Mondain, Jacqueline Stringer, Thierry Mauvisseau, Isabelle Lussot-Kervern, Delphine Marchaud, Albertine Leon, Peter Warn, Sabrina Boutefnouchet, Emmanuel Aduwku

The Foundation convened this group at a seminar organised in September 2025 at Mas Bellile in Saint-Rémy-de-Provence, a historic site for the Gattefossé Group. Collective intelligence workshops held in this special setting led to a collective being built that is founded in a “One Health” approach. Their ambition is to develop joint research projects to assess the potential of essential oils as a lever in the fight against antibiotic resistance.

Collective intelligence workshop

INTERVIEW WITH: Philippe Colls

**Urologist,
Clinique Jules Verne in Nantes, France**

1. Tell us about the creation of this new collective of experts that want to study the potential of essential oils in antibiotic resistance.

On the initiative of the Foundation's Scientific Council Committee, the anti-infectious properties of essential oils have always been seen as a priority area of research.

This is because the growing resistance of microorganisms to antibiotics is now a major public health issue, for both human and veterinary medicine.

Gathering and analysing the existing scientific data to address this challenge has been crucial, at the same time as bringing together experts with complementary skills: specialists in infectious diseases and professionals experienced in aromatherapy.

The aim is to combine fundamental knowledge of microbiology with clinical practices, drawing in particular on the experience of veterinary medicine, where aromatherapy is already used as an alternative or supplement to antibiotic therapy in certain situations.

2. How does this collective seem innovative to you, and how does it fit into a One Health approach?

This collective is innovative because it brings together researchers and practitioners from different backgrounds who face the limitations of antibiotic use daily. This diversity of perspectives enables new avenues for tackling antibiotic resistance to emerge, combining science, clinical practice and a holistic approach to living organisms.

It is important to remember that the microbial world is not an enemy: without microorganisms, life as we know it would not exist. Since the origin of life, close relationships have developed between microbes, plants, animals and humans. These balances are essential to health, but remain fragile when some opportunistic or parasitic microorganisms come into the picture.

Our health therefore depends on the balance of this complex and interconnected ecosystem. This is precisely what the One Health approach is all about: it considers human, animal and environmental health to be inseparable.

In this context, combating antibiotic resistance involves a paradigm shift: it is less about systematically eliminating microorganisms than promoting a sustainable balance between species.

3. What is the role of the Foundation in this project?

The Foundation acts as both a facilitator and catalyst. It creates the conditions for dialogue between researchers and clinicians, to make the link between basic research and practical applications.

By offering a space for discussion, reflection and collective construction, the Foundation creates the conditions for structuring this knowledge and using it to serve innovative health projects.

Aromatherapy and mental health: publication of a position paper

The Foundation coordinates the group and supports the development of its collective initiatives.

From left to right: Nathalie Buonviso, Fiona Hedigan, Anna Oleszkiewicz, Jacqueline Stringer, Delphine Marchaud, Mark Moss, Sophie Gattefossé-Moyrand, Rhiannon Lewis, Véronique Deiller, Sabrina Boutefnouchet

The Gattefossé Foundation brought together a multidisciplinary group of olfaction experts from research, clinical practice and pharmacology from across Europe (Ireland, the UK, Germany and France) to highlight the state of scientific knowledge on the effects of inhalation aromatherapy in mental health.

The main objective of this group is to draw up a benchmark “Position paper”, reviewing the mechanisms of action of inhaled essential oils, the available clinical data, and the methodological recommendations to improve and standardise future research.

The working session to draft this article was held at Mas Bellile, in Saint-Rémy-de-Provence, in June 2025. The article is being submitted and will be published in 2026.

A collective intelligence workshop in St-Rémy-de-Provence

INTERVIEW WITH: Mark Moss

Professor and Head of the School of Psychology, Northumbria University in Newcastle, UK

1. Why can aromatherapy help improve mental health?

It is a sad fact, but in the 21st century global mental health faces the greatest challenges ever recorded. Worldwide, over 1 billion people are affected by chronic conditions such as anxiety and depression, leading to massive economic costs, premature death, and disability. The problem is highlighted through massive treatment gaps with the overwhelming majority (around 90%) of people who need mental health care globally not receiving it due to cost, lack of services, and stigma. Aromatherapy is well placed to make a major contribution to this area. As a low cost effective intervention with minimal risk and high patient acceptability it can be integrated into any health service at scale and at pace. The growing research base clearly indicates that aromatherapy can have a beneficial role to play in the treatment anxiety, depression and stress as well as in support of other treatment approaches where side effects such as nausea, disturbed sleep and negative mood are prevalent. Rather it should be seen as a complimentary or adjunct therapy that can provide subtle but meaningful support for mental well-being when used intentionally.

2. Tell us about your position paper currently being published.

The position paper is aimed at providing a reasoned argument for the inclusion of olfactory interventions and aromatherapy in an integrated patient-centred approach to mental health care worldwide. The paper is currently in the final stages of preparation and includes consideration of the olfactory system, mechanisms of action, evidence from olfactory impairment and restoration, research findings from studies of the benefits for mental health from olfactory interventions, proposals for future directions

and the importance of acceptability, barriers and safety. In a world where the problem of mental health is increasing and access to integrated health care and personalised medicine approaches are gaining traction, the contribution that aromatherapy can make to world's population wellbeing is evident from the research and supported by the basic science. It is time to move forward.

3. What is the Foundation's role in this project?

The Gattefosse Foundation have been the steering force in this project. As individuals, the collective panel are active practitioners, academics, neuroscientists, nurses and researchers. The Foundation had the foresight to bring the individuals together and to challenge them with the opportunity to work together on an integrated position paper that would highlight the potential for aromatherapy in a modern integrated healthcare system and based on their own respective expert knowledge. Quite simply, this project would not have happened without the Foundation organising and funding an in-person two day workshop and discussion meeting followed by a series of online sessions to develop and further the completion of the position paper.

Promoting clinical aromatherapy practices worldwide

Awarding of the 2024 René-Maurice Gattefossé International Prize to Maria Aparecida das Neves by Ségolène Moyrand-Gros, Vice-President of the Foundation, and Delphine Marchaud, Director of the Foundation, in São Paulo in March 2025

In 2025, through its support programmes and its participation in international projects, the Foundation helped to strengthen the recognition of clinical aromatherapy as a useful approach that can be applied to global health challenges.

René-Maurice Gattefossé International Prize 2025

Each year, the René-Maurice Gattefossé prize recognises a professional or team whose aromatherapy practice is a gold standard in their country and its cultural context.

In 2025, Japan took the spotlight with Dr Reiko Sato, Pharmacist and Head of the Pharmacy Department at Shonan Hospital, Fujisawa City.

A pioneer in her field, Reiko Sato incorporated aromatherapy into patient care in 2002. Since then, Reiko Sato has designed and manages a system that allows nurses, physicians, physiotherapists and healthcare staff to practise aromatherapy safely and effectively as part of routine care.

Her protocols include the use of essential oils to:

- Manage dry skin and itching
- Address odour issues
- Reduce anxiety, insomnia and restlessness
- Relieve nausea, respiratory discomfort or dry mouth

Reiko Sato also offers a protocol for post-mortem care called Angel Care, which is a specific procedure that notably incorporates essential oils.

It plays a major role in improving communication and comfort for patients and families in palliative and end-of-life care.

"I would like to use this award to further promote the safe and effective implementation of aromatherapy in clinical settings across Japan – including palliative care units, geriatric wards and general care wards"

Reiko Sato

Over the years, this prize has been awarded in Brazil, South Africa, England, the United States and France.

It highlights how aromatherapy can interact with very different medical worlds, cultures and traditions, while adhering to rigorous health standards.

Heading to Brazil!

For the first time, the Foundation went to Brazil and participated in two major events, one for the presentation of the 2024 René-Maurice Gattefossé International Prize at a São Paulo psychiatric hospital and the other in Rio de Janeiro for the third World Congress on Traditional Medicines.

A prestigious official ceremony at the Psychiatric Hospital of São Paulo

The René-Maurice Gattefossé 2024 award ceremony was held on 19 March at São Paulo Hospital. The event was a very public platform with a big impact in the local press, and it was attended by Daniel Amaldo, integrative health coordinator at the Brazilian Ministry of Health, giving the event deeper legitimacy.

Ségolène Moyrand-Gros, Chair of the Gattefossé Group, and Delphine Marchaud, Director of the Foundation, present the award to Maria Aparecida Das Neves

The video produced by the Foundation had a strong impact, bringing together authentic perspectives from patients and healthcare professionals and demonstrating its value for patient care.

Watch the video ▶

Reiki session with essential oil diffusion

The Foundation took advantage of an immersive day to discover the remarkable work carried out by the botanical therapies team with patients suffering from severe psychiatric disorders. Healthcare workers presented wellness workshops that are integrated into the care pathway: these included

- forest bathing,
- massage
- olfactory games followed by time for discussion

All these practices concretely illustrate an integrative approach to health, centred on the person, the connection with the living world and quality of life.

Strategic participation in the 3rd World Congress of Traditional, Complementary and Integrative Medicines in Rio de Janeiro

This event was a major turning point for the Foundation.

Invited by the Brazilian Academic Consortium of Integrative Health - CABSIN, Delphine Marchaud introduced the Foundation at the opening ceremony and organised a special 90-minute session on clinical aromatherapy, bringing together four European experts who came to share their practices and feedback.

This event confirmed the legitimacy of the Foundation's missions, aligned with the new WHO strategy on traditional and complementary medicines through its contribution to developing evidence-based aromatherapy that can be integrated responsibly and ethically into health systems.

The World Health Organization has published the new 2024-2035 strategy for the development and recognition of traditional and complementary medicines, in order to contribute to universal health coverage and the sustainability of healthcare systems.

The aim of the new roadmap is to develop conclusive evidence, training and regulation to ensure safe and effective integration into health systems.

INTERVIEW WITH: Rhiannon Lewis,

Founder and Director of the International Clinical Aromatherapy Network (ICAN), France

1. Why and how does clinical aromatherapy address some of the major challenges in global health today?

Clinical aromatherapy responds to several major health challenges: symptom management, mental health, antimicrobial resistance, and the need for more person-centered care. As healthcare systems face increasing pressure, complementary approaches that are safe, affordable, and well accepted by patients are becoming essential.

Essential oils contain bioactive compounds with demonstrated antimicrobial, anti-inflammatory, anxiolytic, and analgesic properties. Used alongside conventional treatments, they can improve comfort, reduce anxiety, support sleep, and enhance quality of life. Aromatherapy is not an alternative to medicine, but a complementary that helps humanize care.

2. How can we strengthen the role of aromatherapy as a complementary therapeutic approach in the future?

The future of aromatherapy depends on strengthening its clinical credibility and integration into healthcare systems. This requires high-quality research, including clinical trials, observational studies, and mechanistic investigations, to move beyond anecdotal use toward reproducible outcomes.

Developing clear, internationally recognized practice guidelines is essential, particularly around safety, dosing, contraindications, and ethical use. Education is equally critical: practitioners must be trained to work collaboratively in medical settings, with a solid understanding of pharmacology, pathology, and patient safety.

Sustainability and responsible sourcing must also be prioritized to ensure long-term viability. By combining scientific rigor, professional standards,

and compassionate care, clinical aromatherapy can play a meaningful role in integrative and supportive healthcare worldwide.

3. What is the role of the Foundation in this context?

The Gattefossé Foundation plays a pivotal role in advancing clinical aromatherapy by promoting scientific rigor, international collaboration, and professional standards within integrative health.

Through initiatives such as the René-Maurice Gattefossé International Prize and Aromashowcase, the Foundation highlights innovative projects, shares clinical experience, and strengthens dialogue between practitioners, researchers, and healthcare professionals worldwide.

Internationally, the Foundation has helped elevate aromatherapy's credibility within integrative healthcare circles and serves as a catalyst: shaping the future of clinical aromatherapy by supporting research excellence, encouraging responsible practice, and strengthening the global community working toward improved healthcare outcomes.

3rd edition of Aromashowcase

The Aromashowcase is one of the Foundation's support programmes, which aims to promote and raise awareness of innovative clinical protocols in aromatherapy around the world. This enables healthcare professionals to share practical approaches, based on real-life experiences, which can serve as inspiration for others.

The five finalists selected by a jury of independent experts presented their protocols at a live event, where participants voted for the most relevant and inspiring project.

2025 Winner: Dr Esther Martinez, a pediatric oncologist in Barcelona, was recognised for her programme designed to support children with cancer and their families. Her project involves an aromatherapy kit accompanied by safety information sheets, designed to alleviate certain side effects of treatment and improve everyday comfort.

The other candidates also received a distinction as finalists.

Solidarity and support: donation of materials for Herbalists Without Borders

The Foundation reaffirms its mission to support humanitarian organisations that use aromatherapy in contexts where access to care is limited.

Herbalists Without Borders (HWB) is an international humanitarian network that responds to natural disasters, conflicts or humanitarian crises, providing herbal and aromatherapy care to the most vulnerable populations.

In 2025, the Gattefossé Foundation supported one of their missions with a donation of \$1,000 worth of essential oils. This donation is to be used to manufacture care products, such as soothing foot baths, chamomile lotions, inhalers, lavender bags etc., for pregnant women living in the refugee camps in Tijuana on the border between Mexico and the United States.

These women, mainly from Central America, live in extremely precarious conditions, unable to either cross the border or return to their country of origin.

A group of volunteers working with pregnant women at the Tijuana camp

Supporting integrative healthcare in France

Conference on 'Prevention, treatment and support with a different approach... the contribution of non-pharmacological therapies' at the Senate, October 2025

By supporting professional associations, citizen initiatives and engaged groups in communities, the Foundation is helping to change attitudes and promote the value of a more holistic approach to care.

The film *Viens voir* by the Allié Santé association presented at the French Senate

After two years of broadcasting and a national tour taking in 25 cities, the film “*Viens voir*” proved to be very popular with the public and won the Silver Trophy at the Deauville Green Awards. In November 2025, Laurence Muller-Bronn, the Senator for Bas-Rhin, who is deeply committed to issues of inclusive healthcare, organised a presentation followed by a discussion at the Palais du Luxembourg, bringing together senators and members of parliament.

This broadcast marks an important step: it opens a space for political dialogue in France on the place of complementary approaches in the patient care pathway.

As a sponsor of the documentary since 2023, the Foundation’s commitment continues through support of its distribution throughout France.

The French Clinical Aromatherapy Association

Supported by the Foundation since it was founded in 2022, the French Clinical Aromatherapy Association (l'Association Française d'Aromathérapie Clinique, AFAC) continues to grow.

Part of this is the creation of its “Coup de Pouce & Aroma” grant programme, which aims to support the implementation of clinical aromatherapy protocols or to contribute to the development of projects within healthcare institutions. For this first edition, six grants were awarded.

The association also serves as an information centre. It organises webinars on the use of aromatherapy as a complementary treatment. In 2025, it held a webinar on its use in psychiatric hospitals, during which four speakers from the hospital sector shared their practical experiences.

Finally, AFAC organised its second conference on clinical aromatherapy in Strasbourg. The Foundation helped organise this event, which attracted nearly 200 participants.

Attendees at the 2nd Clinical Aromatherapy Conference, in Strasbourg, November 2025

The Foundation within the SSE

The Gattefossé Foundation is fully engaged in the social and solidarity economy (SSE) ecosystem in France. As such, it regularly participates in forums for reflection and exchange between stakeholders committed to the public interest.

The Foundations Workshop – French Centre for Funds and Foundations

The Foundations Workshop, an annual seminar organised by the French Centre for Funds and Foundations, is one of the major events in the sector. It brings together nearly two hundred actors working for the public interest around the major challenges of philanthropy.

Over three days, the plenary sessions and workshops allow reflections, experiences and best practices to be shared, revitalising participants' inspiration. This year's event was on the theme "The art of relationships", inviting foundations to consider the impact of their relationships on building a just and inclusive society and to explore how to strengthen coalitions to do more together.

7th Philanthropy Conference – Institut Pasteur

The Foundation also took part in the 7th Philanthropy Conference (Assises de la philanthropie), organised at the Institut Pasteur. This conference brought together more than 520 professionals from the sector and 16 French and international speakers on the theme "Philanthropy in the face of major global challenges".

The discussions highlighted the growing role of foundations in responding to global challenges, by connecting grass-roots positioning with an international vision. These meetings provide a better understanding of how philanthropy can help address complex global challenges.

For a corporate foundation, these discussions are particularly inspiring. They remind us that companies can no longer limit themselves to creating economic value alone: they must also fully engage with social responsibility and make a concrete commitment to the common good.

The Foundation, the strategic lever of the Gattefossé group's sustainable development

This year, the Gattefossé group invited the Foundation to take part in its managerial seminar, "Gatt lead and grow". Participating in this event meant that the Foundation could tell the company about its experiments on the ground and how it constantly seeks to adjust in its project management to optimise its impact.

The outcome is that the event fosters a culture common to the company and its foundation, based on meaning, impact and responsibility.

Speech by Delphine Marchaud, Director of the Foundation, at the Gatt'Lead&Grow seminar

INTERVIEW WITH : Sabrina Boutefnouchet

President of AFAC; Professor of Pharmacognosy, Paris-Cité University, France

1. Why was a formal structure needed for clinical aromatherapy in France?

Clinical aromatherapy is expanding in France, driven by healthcare professionals who are undergoing training to use essential oils safely with their patients. In this context, the formation of a collective quickly became a necessity, in the absence of an organised network at that time.

It is essential to unite practitioners to harmonise practices, improve their quality and enable more patients to benefit from this complementary approach in the provision of care.

Furthermore, forming a collective allows a common voice to be heard by the institutions, in a context still marked by a lack of regulatory framework and official recognition.

2. How can we strengthen the recognition and integration of clinical aromatherapy in the French healthcare system in the future?

Harmonising practices:

The integration of essential oils as complementary care in healthcare facilities requires adherence to stringent standards in terms of quality, traceability, efficacy and safety. It is essential to guarantee that the raw materials are good quality, and that products are used safely and under strict conditions that are adjusted according to the routes of administration and contraindications.

Strengthening the scientific evidence :

While clinical research is expanding internationally, studies in France are still emerging and often limited by insufficient numbers. It is therefore crucial to pool efforts, particularly through multicentre studies, to produce robust data and consolidate the legitimacy of clinical aromatherapy in the medical field.

3. What is the role of the Foundation?

The Gattefossé Foundation has been playing a key role in the development of clinical aromatherapy in hospitals for more than ten years. Through an innovative grant programme, it has supported the implementation of protocols in many healthcare facilities.

Its scientific advisory board was behind the creation of the French Association of Clinical Aromatherapy (AFAC) in 2022, with the aim of providing a framework for the community of trained professionals and support large-scale projects.

The Foundation worked closely with the association to support its launch, notably through skills-based sponsorship, by developing its tools and organising its activities. Today, it remains highly supportive and continues to be involved as a sponsor of the grant programme run by the AFAC, which helps to facilitate the roll-out of projects on the ground and to enhance the visibility and credibility of clinical aromatherapy within the complementary therapy landscape.

Governance

The Gattefossé Foundation is an independent legal structure, financed by the Gattefossé company, whose activities are philanthropic.
